

Operations
Management

*Redeveloping
a client's
manufacturing
capability*

Background

Several years after idling a component manufacturing plant, a midsize device manufacturing company determined that they would again manufacture their own components. Numerous obstacles stood in the way: the company lacked the number of people and the right people to ramp up production, had inadequate training in place, and many believed the goal was unattainable. After all, management wanted to regain manufacturing capability within three months – at volume.

Solution

PLS and the company's staff determined what was possible, set an aggressive goal, then planned how to accomplish it. Project Leaders calculated how much money, personnel, equipment and materials were needed, then created a reasonably aggressive schedule with agreed-upon milestones. Where infrastructure upgrades were needed, PLS recruited, hired and supervised employees and consultants with the skills necessary to keep the project on track.

Results

All goals were accomplished on time and under budget, and the project returned its cost in less than a year.
